

Phifer
SheerWeave®

BRAND FABRIC

2000 Series Fabrics Now With

 **Microban**®
antimicrobial product protection

STAY COOL. LIVE CLEAN.

Phifer uniquely combines the performance of SheerWeave® sun control fabrics with MICROBAN® antimicrobial technology to provide continuous product protection against stain-causing bacteria, mold and mildew.

MICROBAN® product protection available in

STYLES 2000/2100 · Average Openness 5%/10%

Styles 2000 and 2100 are full basketweaves that offer the flexibility of a non-directional fabric and the classic appearance of a more opaque sun control shade. Filtered light and exterior views can be accomplished through ten decorator colors.

STYLES 2390/2360/2410/2500 · Average Openness 5%/10%/3%/1%

With multiple openness factors ranging from 1% to 10% and nine neutral colors, Styles 2390/2360/2410 and 2500 provide the options you need to address your solar heat, glare, UV and visibility needs by combining the engineering of thin, lightweight yarns in a functional basketweave.

STYLES 2701/2703/2705/2710 · Average Openness 1%/3%/5%/10%

Styles 2701, 2703, 2705 and 2710 are woven from a unique will pattern that displaces the individual yarns creating a two-sided fabric to capture the best performance values that light and dark colors offer in heat reduction, glare reduction and improved visibility. Available in 5 color combinations, these Styles meet all of your performance and decorating needs.

- Microban antimicrobial protection works continuously for the lifetime of the shade to inhibit the growth of stain-causing bacteria, mold and mildew.
- Phifer's 2000 Series fabrics are the only shade fabrics in the world to include Microban protection
- SheerWeave fabrics infused with Microban antimicrobial technology are ideal for any commercial or residential environment where microbes are a concern including:
 - Healthcare
 - Hospitality
 - Home and Office
 - Schools and Institutions
