How to Clean 3.5" PVC Vertical Blinds

Cleaning PVC Vertical blinds is a simple process and can be accomplished quickly and easily.

Things You Will Need:

- Duster
- Paper Towels
- Sponge
- Mild Soap

Dust your blinds regularly. A light dusting between each slat of the blind will remove unsightly surface dirt and dust that accumulates. Feather dusters as well as synthetic types can be used to dust the blinds while they are still hanging. A soft dry cloth can also be utilized as a dusting tool.

Wash the blinds. For stains or deep cleaning a big positive with PVC Vertical blinds is that they can be cleaned using water. Adding some non-abrasive soap to warm water should do the trick. Remember not to use purely hot water as this could damage the integrity of your blind. Most liquid dish soaps are perfect for this type of cleaning.

You may find it is easier to clean your blinds with soap and water if they are removed from the window or clean them while hanging and tilted to the open position. Rinse your PVC Vertical blinds thoroughly after washing (never use any harsh detergent, spray cleaners or abrasive sponges).

Before you re-hang your PVC Vertical blinds dry thoroughly with paper towels. If you cleaned your blinds while they were hanging, you can dry them quickly by simply placing a fan in front of them for a few minutes.

Always use care when cleaning any window covering product. Damage, stains or discoloration to cords, chain, ladder, slats, tubes, fascia/valance, headrail, tilt rod, hardware or any part of the window covering resulting from regular maintenance, cleaning or operation will not be covered under the manufacturer's warranty.
